## Professional Summary

---

-driven Computer Science Engineering student (AI/ML, Honors in Cyber Security) with hands-on experience in threat detection, vulnerability assessment, and security tool deployment across live industry environments. Proficient in network analysis tools including Nmap and Wireshark, with practical exposure to malware analysis via MobSF and APK threat detection using ML-assisted feature extraction. Developed an AI-powered chatbot and a fake APK detection system achieving 85–90% accuracy, demonstrating applied security engineering skills. Seeking a role to contribute to proactive threat mitigation and incident response.

## Education

---

CHRIST (Deemed to be University), Bangalore – Kengeri Campus 2023 – 2027  
BTech in Computer Science and Engineering: Artificial Intelligence and Machine Learning  
(Honors in Cyber Security) – 74.97%

## Work Experience & Internships

---

**Soften Technologies, Kadavanthara, Kochi** April 2025 – May 2025  
*Full Stack Web Development Intern*

- Designed and implemented a secure backend architecture with optimized database schema, reducing data redundancy by 30% and improving query performance across a production web application.
- Developed RESTful APIs and server-side logic with input validation and error handling, applying secure coding practices to ensure data integrity and safe storage.

**Cezen Technologies Pvt. Ltd., Bangalore** April 2026 – May 2026  
*Cybersecurity AI Intern*

- Conducted hands-on security assessments using 5+ industry tools including network scanners and threat mitigation frameworks, contributing to vulnerability identification in a live environment.
- Engineered and deployed an AI-powered chatbot integrated into the company's security operations workflow, reducing average customer query response time by 40% and automating tier-1 triage.

## Skills

---

**Programming Languages:** Python, C, Java

**AI/ML:** RAG, LLM Integration, Vector Search, Scikit-learn.

**Web Development:** HTML, CSS, JavaScript, React.js, Node.js, MongoDB

**Cyber Security:** Linux Ops, Wireshark, MobSF, Nmap, Burp Suite

**Security Concepts:** Vulnerability Assessment, Threat Detection, Incident Response, Network Security, Malware Analysis.

**Operating Systems & Platforms:** Linux (Kali, Ubuntu), Windows

**Soft Skills:** Leadership, Responsibility, Communication

## Projects

---

### Internal Co-ordination Platform - EventOps

- Built a full-stack event coordination platform (10,000+ lines, React 18 + Node.js + MongoDB) with role-based access control across 5 permission levels and real-time collaboration via WebSockets.
- Integrated a Groq-powered AI assistant (LLaMA 3.3-70B) with live database context, enabling natural language task creation, Kanban board management, and cross-channel messaging within the platform.

### AI Knowledge Chatbot (RAG-Based)

- Built a Retrieval-Augmented Generation (RAG) chatbot to answer domain-specific queries from institutional website data and documents.
- Implemented web scraping, text chunking, embedding generation, and vector search for context-aware responses.
- Integrated backend APIs with a custom frontend and deployed locally using Python and FastAPI.

### Daily Coding Challenge

- Implemented a role-based system for Student, Teacher, and Admin using Google Sheets as a backend integrated with HTML and JavaScript.
- Developed a web-based dashboard to analyze daily coding challenge statistics, tracking attempts and scores across 50+ test entries.

### Fake APK Detection System – APKShield

- Developed a cybersecurity-focused system to detect malicious or fake Android APK files by analyzing permissions, metadata, and behavioral indicators.
- Implemented feature extraction and rule-based / ML-assisted analysis, achieving 85–90% detection accuracy across 50+ APK samples while reducing false positives through iterative testing.
